Beginner Frontend – Day 6

Hi everyone! ■

Today we will learn **HTML, CSS and JavaScript** together, with a focus on Responsive Design and basic JavaScript interaction.

■ Today's Learning

HTML

- Div and sections
- Buttons
- Images
- Basic page structure

CSS

- Box Model
- Flexbox
- margin & padding
- justify-content
- align-items
- Responsive design
- Media queries

JavaScript

- Functions
- Events
- onclick
- DOM basics
- classList
- Changing HTML/CSS using JavaScript

■ Example – Dark Mode Button

Create a button that changes the webpage between normal mode and dark mode.

JavaScript: function toggleMode() { document.body.classList.toggle('dark'); }

HTML: <button onclick="toggleMode()">Toggle Dark Mode</button>

This is only an example to understand JavaScript interaction with CSS.

■ DAY 6 TASK – Responsive Profile Cards

Create a **Responsive Profile Card Section** using **HTML, CSS and JavaScript**.

HTML Requirements

- Profile image

- Name
- Short description
- Skills
- View Profile button

CSS Requirements

- Use Box Model
- Use Flexbox
- Add margin and padding
- Style the cards
- Add hover effects
- Use a media query for responsive design

JavaScript Requirements

- Add a View Profile button
- On click, display a short message or additional information
- Use DOM concepts to change the content

■ Challenge

- Create 3 profile cards
- Desktop: 3 cards in one row
- Mobile: cards one below another
- Make the View Profile button work using JavaScript

■ Today’s Goal

HTML → Structure
CSS → Design & Responsive Layout
JavaScript → Interaction

Try to build it yourself instead of copying a complete project. ■■
